

Robot

Tux Droid can flap his wings, open and close his beak and eyes. All the movements can be controlled by events on your PC!

1. Push button on the top of the head
2. Moving eyes : open and close
3. LED's in the eyes : can play with the intensity + light sensor
4. Microphone in the beak
5. Switch on each wing
6. Flapping wings : up and down
7. Spin left and right
8. Sound controller
9. Plug audio IN
10. Plug audio OUT (headsets)
11. Speaker
12. Rechargeable battery
13. ON/OFF

Tux Droid can talk to you or sing through his speaker.

With the text-To-Speech software Tux Droid can talk in more than 10 languages. You can test the different voices and languages in [do you speak penguish?](#)

He can also listen to you with his microphone.

You want to use him as a spy or just to call your friend with VOIP? He can do it!

Tux Droid has special bionic eyes

- **Light sensor:** “It's too dark here. I can't even see my belly anymore.”, “It's early and bright. Are you still awake or just awake?”
- **IR receiver:** you can control Tux Droid easily with a remote control (included in the box)
- **IR transmitter:** the fun is endless! Imagine your sister watching her favorite soap and Tux starts switching to the most boring channel.
- **2 Blue LED's:** giving Tux Droid that special fuzzy and kinky look.
